DIGITAL POWER METER

AMETEK's Multi-Function Digital Power Meter is an "all inclusive" power measurement system. A single unit will connect to any circuit type. The universal power supply will support a wide range of AC and DC voltages. Each unit comes with RS-232/485 serial communications using Modbus or DNP protocols. The unit has the ability to provide multiple analog and digital outputs without any external interfaces or converters, saving on installation and unit cost. All features are easily configured through software, so you truly have one unit that does all.

The DPMS-PM is several instruments in one:
- Digital Power Meter
- Power Transducer
- IED (Intelligent Electronic Device)

Save on installation, panel space and unit cost with our combined functionality.

Measurements
- Voltage, Current, Frequency
- Watts, Vars, VA, Power Factor
- Watthour, Varhour
- Harmonics (current & voltage THD)
- TLC (Transformer Loss Compensation)

Large Bright Display
- Large 0.56" H seven segment LEDs
- Three rows x 5 Digit LEDs for simultaneous display per phase
- Scrolling function displays all measurements
