Operate it on a PC with easy-to-use Windows based software or with an optional hand-held configurator for easy, on-site configuring and reconfiguring of modules. Alternatively, opt for the factory to perform a custom configuration to meet your needs.
The SC-7400 series incorporates state-of-the-art technology to provide:

- safe, reliable monitoring of plant and machinery
- peak operation for your equipment
- reduced overall system cost and calibration efforts
- the highest density available in smart technology
- the highest level of operational diagnostics and accuracy

With the SC-7400, one unit can be programmed to meet numerous applications ... and you may purchase it with optional intrinsic safety barriers that meet CSA and FM agency requirements. Functional benefits include detachable field wiring, password protection, integrity diagnostics, full software programmability, high packing density, low spare inventory, and EMC immunity.
Fully trained Rochester representatives are equipped with demonstration units for customer selection assistance.
